

Table of Contents

Chapter 1 Introduction.....	1
Pair of leads.....	2
Coaxial cable.....	2
Wave guide.....	3
Glass fiber.....	3
Plane wave in free space.....	3
The Poynting vector.....	4
1.1 Fields in nature.....	5
1.2 Fields in electrical engineering.....	6
1.3 Field quantities.....	8
1.4 Field lines.....	12
1.5 Electric charges and currents.....	12
Summary chapter 1.....	13
 Chapter 2 Fields and fluxes.....	 15
2.1 Differences between electric and magnetic fields.....	15
2.1.1 Causes of fields.....	15
2.1.2 Forces exerted by fields.....	15
2.2 Line integrals and contour integrals.....	17
2.3 Surface integrals.....	18
2.4 Measuring line and surface integrals.....	21
Line integral of E	21
Contour integrals of E	21
Line and contour integrals of B	22
Surface integrals.....	22
Summary chapter 2.....	24
 Chapter 3 Maxwell's laws in integral form.....	 27
3.1 Laws of Faraday and Ampère.....	27
3.2 Four laws of Maxwell, in integral form.....	29
3.3 Examples and discussions.....	29
Regions with curl-free fields.....	30
Regions with divergence-free fields.....	30
Coulomb's law is in agreement with Maxwell.....	30
The magnetic field around a current-carrying wire.....	31
Law of Biot and Savart.....	32
3.4 Fields influenced by conductors and insulators.....	33
Conductors and insulators.....	33
3.5 Fields at interfaces.....	33
3.6 Fields at the boundary of insulators.....	35
3.7 Fields at the boundary of conductors.....	36
3.8 Four Field Quantities in Actual Components.....	37
3.9 Electromagnetic Waves.....	39
Summary Chapter 3.....	41

Chapter 4 Forces, torques, motors and energy	43
4.1 Forces on point charges	43
4.2 Forces on straight current-carrying wires	43
4.3 Torques and forces on dipoles.....	44
Electric dipoles.....	44
Magnetic dipoles	45
4.4 Motors	45
The synchronous motor	47
The asynchronous motor	47
4.5 Energy	48
Summary Chapter 4.....	49
 Chapter 5 Maxwell and Kirchhoff.....	 51
5.1 Models for calculations and for understanding.....	51
5.2 A circuit diagram is only symbolic	52
5.3 First law of Kirchhoff, the current law	53
5.4 The second law of Kirchhoff, the voltage law	53
5.5 Factors favorable for circuit theory	56
5.6 Energy in components.....	57
Summary Chapter 5.....	59
 Chapter 6 Capacitances and inductances	 61
6.1 How do we determine C and L?	61
6.2 Calculations on capacitors.....	62
6.3 Calculations on inductances	65
6.4 Images.....	68
6.5 Capacitances and inductances of long straight structures.	69
6.6 Transport of signals in cables.....	70
Summary Chapter 6.....	72
 Chapter 7 Mutual inductance and coupled coils.....	 73
7.1 Mutual inductance and Lenz' law	73
7.2 Two coupled coils, the transformer	74
7.3 Two coupled coils, the Rogowski coil	78
Summary chapter 7.....	80
 Chapter 8 Electromagnetic Compatibility.....	 81
8.1 Interference, a growing problem	81
8.2 Interference, often caused by fields and Common Mode-currents	81
8.3 The CM-loop, a ground loop	83
8.4 Transfer impedance, definition.....	84
8.5 Reduce the transfer impedance.....	85
8.5.1 Separate I_{CM} and I_{DM} for a shielded cable	85
8.5.2 Separate I_{CM} and I_{DM} for an unshielded cable	85
8.5.3 Transfer impedance of cables.....	86
8.6 The skin effect.....	87
8.7 Skin effect and shielding	88
8.7.1 A track above a copper ground plane.....	88

8.7.2 A cable protected by a parallel ground plane.....	89
8.7.3 A metal enclosure shielding electronics.....	90
8.8 Additional methods to achieve EMC	91
8.8.1 Limiting Bandwidth	92
8.8.2 Limiters	92
8.8.3 Isolating devices	92
8.8.4 Software	92
Summary chapter 8.....	93
 App. A Maxwell's laws in various disciplines of Electrical Engineering.....	 95
 Appendix B More about those fields	 97
B.1 Do fields exert forces on charges?	97
B.2 What exactly are those fields?	97
B.3 How did one arrive at those complicated laws of Maxwell?	98
 Appendix C Conflicts between Kirchhoff and Maxwell.....	 99
 Subject Index	 103
