

Development of Dynamic Models with Spatial Resolution for Electrochemical Energy Converters as Basis for Control and Management Strategies

Von der Fakultät für Elektrotechnik und Informationstechnik
der Rheinisch-Westfälischen Technischen Hochschule Aachen
zur Erlangung des akademischen Grades einer
Doktorin der Ingenieurwissenschaften genehmigte Dissertation

vorgelegt von

Diplom-Ingenieurin

Yu Wang

aus HEILONGJIANG, Volksrepublik China

Berichter: Universitätsprofessor Dr. rer. nat. Dirk Uwe Sauer

Universitätsprofessorin Dr.-Ing. Ferdinanda Ponci

Tag der mündlichen Prüfung: 18. Dezember 2015

Contents

1. Introduction.....	1
2. Fundamental Physics for electrochemical energy converters	3
2.1 Electrode kinetics	3
2.1.1 Gibbs free energy.....	3
2.1.2 Nernst equation	4
2.1.3 Temperature dependence of potential	5
2.1.4 Butler-Volmer equation.....	5
2.2 Charge transfer	8
2.2.1 Secondary current distribution	8
2.2.2 Tertiary current distribution	9
2.3 Fluid dynamics.....	9
2.3.1 Fluid in free channels.....	10
2.3.2 Fluid in porous media.....	10
2.4 Mass transport.....	11
2.4.1 Transport of concentrated species.....	11
2.4.2 Transport of diluted species	12
2.5 Thermal dynamics	13
3. Finite element method modeling in Comsol Multiphysics	15
3.1 Graphical user interface	15
3.2 Model setup.....	16
3.3 Meshing and running study	17
3.4 Results analysis.....	18
3.5 LiveLink for MATLAB.....	18
4. High temperature proton exchange membrane fuel cells	19
4.1 State of the art technology.....	20
4.2 FEM modeling.....	25
4.2.1 Model setup.....	25
4.2.2 Model validation	29
4.2.3 Parametric study.....	30
4.3 System modeling.....	33
4.3.1 High pressure tank	34
4.3.2 Compressor	37
4.3.3 Heat exchanger.....	39
4.3.4 Electric heater.....	39

4.3.5	Mass flow controller.....	40
4.3.6	Mixer valve.....	41
4.3.7	System and cell efficiency	41
4.4	Communication between FEM model and system model	42
4.5	Analyses and discussion of results	42
5.	All-vanadium redox-flow batteries.....	55
5.1	State of the art technology.....	60
5.2	FEM modeling.....	64
5.2.1	Single cell model.....	65
5.2.2	Model validation	68
5.2.3	Parametric study.....	73
5.3	System modeling.....	77
5.3.1	Pump	78
5.3.2	System and cell efficiency	79
5.4	Communication between spatial and system models.....	79
5.5	Analyses and discussion of results	80
6.	Extension and application of developed models	93
6.1	Start-up process of HT-PEMFCs.....	93
6.1.1	3D geometry of single HT-PEMFC.....	94
6.1.2	Analyses and discussion of results	95
6.2	Crossover effect in VRFBs.....	107
6.2.1	Assumption.....	109
6.2.2	Physics of crossover	109
6.2.3	Boundary conditions.....	110
6.2.4	Analyses and discussion of results	110
6.3	Direct methanol fuel cells	115
6.3.1	State of the art technology.....	115
6.3.2	FEM modeling.....	118
6.3.3	System modeling	123
6.3.4	Communication between spatial and system models.....	124
6.3.5	Analyses and discussion of results	125
7.	Summary	135
8.	Bibliography	139
A	Appendix.....	159
A.1	Abbreviations	159
A.2	Nomenclature.....	161
A.3	Parameters for HT-PEMFC.....	166

A.4	Parameters for VRFB	169
A.5	Parameters for DMFC	172
A.6	Experimental data for VRFB	175
A.7	Simulink system model for HT-PEMFC	179
A.8	Simulink system model for VRFB	180
A.9	Simulink system model for DMFC	181
B	Curriculum vitae	183
C	Guided student theses.....	185
D	Own publications.....	187
